

Subject index of volume 8

- Adaptive algorithms 1
- Admissible runs 203
- Asynchronous circuits 143
- Asynchronous communication 211
- Asynchronous protocols 203
- Atomic snapshot 121
- Availability 39, 191
- Bounded response time 143
- Byzantine Agreement 59
- Checkpointing 105
- Closed schedulers 203
- Communication protocols 211
- Concurrent data object 65
- Consensus 65
- Conservative approach 181
- Consistent global states 81
- Consistent snapshot 93
- Correctness 65
- Coterie 39, 191
- Counters 143
- Crash recovery 105
- Deadlock detection 93
- Distributed algorithm 105
- Distributed algorithms 81, 151
- Distributed computing 115
- Distributed Consensus 59
- Distributed deadlock 181
- Distributed garbage collection 93
- Distributed mutual exclusion 171
- Distributed snapshots 81
- Distributed synchronization 171
- Distributed system 191
- Distributed systems 59, 93, 143
- Early stopping 59
- Fault tolerance 191
- Fault-tolerance 59, 133
- FCFS queueing network 181
- F-channels 211
- Graph theory 151
- Handshake circuits 143
- Hierarchical channels 211
- High-performance computing and communication 211
- Invariant 65
- Lattice agreement 121
- Leader election 1
- μ -exclusion 133
- Linearizable 65
- Load balancing 163
- Lookhead 181
- Lower bounds 115
- Memory management 65
- Message complexity 105
- Minimum spanning tree 151
- Multilevel voting 39
- Multiprocessor 181
- Multi-token ring 133
- Mutual exclusion 1, 39, 133, 191
- Network 191
- Optimistic message logging 105
- Parallel algorithm 19
- Parallel simulation 181
- Performance 171
- Priority 171
- Producer/consumer 163
- Quorum 39, 191
- Randomized protocol 19
- Recursive designs 143
- Replication 39
- Ring 191
- Rollback recovery 105
- Self-stabilization 133
- Smoothing networks 163
- Space complexity 65
- Stability 65
- Strong stable property 93
- Synchronization 1, 19, 151
- Systolic designs 143
- Termination detection 93
- Time complexity 65, 151
- Torus 181
- Transformational design 143
- Wait-free 65
